

## Drafting and interpreting financial statements: Summary of corrections to course materials

These changes affect version V001 of the materials.

### Course Notes & Questions

Pg 36 Current value	<p>There is a new definition of “fair value” as follows:</p> <p><i>Fair value is the price that would be received to sell an asset, or paid to transfer a liability, in an orderly transaction between market participants at the measurement date.</i></p> <p>This has also been updated at the bottom of page 157.</p>																																								
Pg 77 Lecture example 3 solution	In the trade and other payables working box, trade payables has been incorrectly labelled as trade receivables.																																								
Pg 126 Illustration	<p>Question should say:</p> <p>How much cash has been received <u>from</u> customers?</p>																																								
Pg 226 Lecture example 2 solution	<p>The solution to this question was missing from the materials:</p> <p>What are the accounting entries required on 1 January 20X1 in relation to this lease?</p> <p>Journal for the present value of future lease payments:</p> <p><i>DR Right of use asset £86,780</i></p> <p><i>CR Lease liability £86,780</i></p> <p>Journal for the first instalment on 1 January 20X1:</p> <p><i>DR Right of use asset £50,000</i></p> <p><i>CR Cash £50,000</i></p> <p>What are the amounts of the finance cost, interest accrual, lease liability (current &amp; non-current) and right of use asset for each year of the lease?</p> <table><tr><th></th><th>Capital</th><th>Interest</th><th>Cash</th></tr><tr><td><b>At 1/1/X1</b> – present value of future lease payments</td><td>86,780</td><td></td><td></td></tr><tr><td>Interest @ 31/12/X1 (<b>86,780 x 10%</b>)</td><td></td><td>8,678</td><td></td></tr><tr><td><b>31/12/X1</b></td><td>86,780</td><td></td><td></td></tr><tr><td>Repayment 2 @ 1/1/X2</td><td>(41,322)</td><td>(8,678)</td><td>50,000</td></tr><tr><td>Sub-total</td><td>45,458</td><td></td><td></td></tr><tr><td>Interest @ 31/12/X2 (<b>45,458 x 10%</b>)</td><td></td><td>4,546</td><td></td></tr><tr><td><b>31/12/X2</b></td><td>45,458</td><td></td><td></td></tr><tr><td>Repayment 3 @ 1/1/X3</td><td>(45,454)</td><td>(4,546)</td><td>50,000</td></tr><tr><td><b>31/12/X3</b></td><td>4</td><td></td><td></td></tr></table> <p>Rounding diff – would be adjusted through interest to bring liability to Nil</p>		Capital	Interest	Cash	<b>At 1/1/X1</b> – present value of future lease payments	86,780			Interest @ 31/12/X1 ( <b>86,780 x 10%</b> )		8,678		<b>31/12/X1</b>	86,780			Repayment 2 @ 1/1/X2	(41,322)	(8,678)	50,000	Sub-total	45,458			Interest @ 31/12/X2 ( <b>45,458 x 10%</b> )		4,546		<b>31/12/X2</b>	45,458			Repayment 3 @ 1/1/X3	(45,454)	(4,546)	50,000	<b>31/12/X3</b>	4		
	Capital	Interest	Cash																																						
<b>At 1/1/X1</b> – present value of future lease payments	86,780

Sub-total	45,458																																								
Interest @ 31/12/X2 ( <b>45,458 x 10%</b> )		4,546																																							
<b>31/12/X2</b>	45,458																																								
Repayment 3 @ 1/1/X3	(45,454)	(4,546)	50,000																																						
<b>31/12/X3</b>	4																																								

**Extracts from the financial statements**

## Statement of financial position

	20X1 £	20X2 £	20X3 £
<b>PPE (right of use asset)</b>			
Cost <b>(86,780 + 50,000)</b>	136,780	136,780	136,780
Accumulated depreciation	(45,593)	(91,186)	(136,780)
Carrying amount	91,187	45,594	0
<b>Current liabilities</b>			
Lease liability	41,322	45,454	0
Interest accrual	8,678	4,546	0
<b>Non current liabilities</b>			
Lease liability	45,458	0	0

## Statement of profit or loss

	20X1 £	20X2 £	20X3 £
<b>Depreciation (136,780 / 3 years)</b>	45,593	45,593	45,594
<b>Finance charge</b>	8,678	4,542	0

## Task Bank & Mocks

### Mock 1 Task 5 Solution

The cost of sales working had been added up incorrectly. The corrected solution is as follows:

#### Boards Group

#### Statement of profit or loss for the year ended 31 March 20X2

	Boards Group £'000
Revenue	3,056
Cost of sales	-871
Gross profit	2,185
Distribution costs 412 + 43	-455
Administrative expenses 102 + 88	-190
Operating profit	1,540
Finance costs 67 + 18	-85
Profit before tax	1,455
Tax 306 + 132	-438
Profit for the period from continuing operations	1,017

Attributable to:

	£'000
Owners of the parent (balancing figure)	925
Non controlling interests 313-8 (PUP) x 30%	92
	1,017

Revenue (W1)	£'000
Boards Ltd	2,456
Boots Ltd	712
Intercompany sales	-112
Group revenue	3,056

Cost of sales (W2)	£'000
Boards Ltd	857
Boots Ltd	118
Intercompany sales	-112
Intercompany inventory adjustment (W3)	8
Cost of sales	871

Inventory adjustment (W3)	£'000
Sales 140%	112
Cost of sales 100%	80
Profit 40%	32
Profit in inventory (PUP) x $\frac{1}{4}$	8

## Other

Please see additional handout about the input / output method of recognising revenue.

## **AAT LEVEL 4**

### **Drafting and interpreting financial statements (DAIF)**

#### **Extra notes on the input / output method of recognising revenue**

## Chapter 9 – Further accounting standards

These notes provide extra detail to “Step 5” of the revenue recognition process.

### IFRS 15 Revenue Recognition – Additional example

IFRS15 adopts a 5-step process in recognising revenue, step 5 is to allocate the transaction price as each performance obligation is satisfied. If control passes over time the company should use a method that reflects the entity’s performance in transferring control of goods or services e.g.

Look at what % of the contract has been fulfilled and recognise the revenue accordingly. This is sometimes referred to as an input / output basis.

#### Example 1

Company A has a contract with a customer with a total sales value of £500,000, expected total costs of £400,000 and an expected profit of £100,000. The value of work done at the year end date is £200,000. The company has decided that progress towards completion should be measured according to the percentage of work done (output basis).

Using an output basis we can determine that £200,000 / £500,000 or 40% of work has been completed so we should include 40% of the total results in the SPL as follows:

Sales (value of work done according to example)	£200,000
Cost of Sales (40% x £400,000)	£160,000
Profit (40% x £100,000)	<b>£40,000</b>

#### Example 2

Company B has a contract with a customer with a total sales value of £700,000, expected total costs of £550,000 and an expected profit of £150,000. The company has incurred costs at the year end date of £330,000. The company has decided that progress towards completion should be measured according to the costs incurred so far (input basis).

Using an input basis we can determine that £330,000 / £550,000 or 60% of work has been completed so we should include 60% of the total results in the SPL as follows:

Sales (60% x £700,000)	£420,000
Cost of Sales £330,000 (according to example)	£330,000
Profit (60% x £150,000)	<b>£90,000</b>

#### Summary

Output basis will measure the degree of completion as:

Sales to date / Total contract price e.g.  $200 / 500 \times 100 = 40\%$

Input basis will measure the degree of completion as:

Costs to date / Total expected costs e.g.  $330 / 550 \times 100 = 60\%$
